The Architect
Architects plan, design and review the construction of buildings and structures for the use of people by the creative organisation of materials and space. Architects consider the needs of the client and the environment, and apply their knowledge of science, technology, to achieve an end which is both aesthetically pleasing and functional. Architects are concerned with the practical and often complex problems of engineering design, which has as its primary purpose the safe and efficient utilisation of materials and energy. Architects produce technical drawings, plans and specifications for the structure and/or interior of buildings and other structures, such as roads, airports, harbours, dams, irrigation systems, powerplants, telecommunication towers, pipelines and containers.

Culture & Art

The Architect
Architects plan, design and review the construction of buildings and structures for the use of people by the creative organization of materials and components with consideration to mass, space, form, volume, texture, structure, light, shadow, materials, function, and ergonomic elements, angles and curves. In addition to artistic and aesthetic elements, they also consider the social, cultural, and other needs of society.
